## Schedule 1 - Services

[To be added in agreement between the Buyer and Supplier, and will be G-Cloud Services the Supplier is capable of providing through the Digital Marketplace.]

### Overview

Artificial Intelligence (AI) has the potential to make a massive difference to health and care. A broad range of techniques including: inductive logic programming, robotic process automation, natural language

processing, computer vision, neural networks and distributed artificial intelligence can be used to create Artificially Intelligent Systems capable of carrying out or augmenting health and care tasks which until now been completed by humans or have not been possible previously. This presents significant opportunities for improving productivity, improving care, and saving lives. It could help personalise NHS screening and treatments for cancer, eye disease and a range of other conditions, as well as freeing up staff time.

On 8 August 2019, the Prime Minister announced a £250 million boost to artificial intelligence to support the development, deployment and diffusion of AI to help tackle some of the toughest challenges in health and care, including earlier cancer detection, discovering new treatments and relieving the pressure on the workforce.

This investment will support the creation of the NHS AI Lab which will bring together the industry's best academics, specialists and technology companies to build ground-breaking diagnostic tools and treatments in line with the NHS's priorities.

The NHS AI Lab will develop and deploy practical applications of artificial intelligence in the NHS, improving the health and quality of life for our citizens. It will harness the power of data science and AI to turbo-charge our ability to make evidence-based decisions in health and social care and position the NHS as a world leader in the use of artificial intelligence in health. It will do this in partnership with the workforce and system ensuring that skills are not only developed, but also retained and integrated into the system.

Understanding there are ethical and safety concerns associated with the use of AI in health and care, the Lab will align to the core founding principles of the NHS addressing transparency, safety, privacy, explicability and bias. By building on the foundations already laid, for example in our Code of Conduct for Data-Driven Health and Care Technologies, these frameworks and best practices will ensure the project maintains the support of the public, and that UK entrenches its leadership in the development of safe and effective AI.

The NHS AI Lab will help to build on the groundwork of this work and will predominantly support the deployment of AI systems by providing technical expertise and supporting the development of adequate frameworks for the safe and responsible deployment of AI.

NHSX are looking for a partner to help shape and deliver the NHS AI Lab. We are looking for a delivery partner capable of helping to harness the wealth of talent that exists within the NHS and wider health and care system.

## **Outcomes**

- Design with the AI team what the NHS AI Lab will look like, with options on physical vs virtual settings and how it will sit alongside other government AI Labs
- Support and help improve the NHSX Innovative Data Analytics capacity and capability, providing training and resource where necessary
- Scope and design a procurement specification for the development of validation datasets Run discovery into the technical architecture required for a platform allowing for AI products/services to be easily deployed and surfaced within clinical workflows.
- Development of change management frameworks and service redesign for adoption of AI - covering national, regional, and local levels and in line with the four priority areas of the AI in Health and Care Award.
- Assist in the recruitment of permanent members of staff to self-sustain the AI Lab within NHSX

Faculty team will be working across three key workstreams:

1. **Strategy and oversight:** defining the direction, and plan for the programme of work, aligning stakeholder requirements and coordinating the best approach to delivery
2. **Modelling and simulation:** using data from across the healthcare system to model scenarios to better understand the impact of the spread of COVID-19 on healthcare resources
3. **Health system dashboard:** presenting carefully curated information about COVID-19, and its impact on the healthcare system, to support decision making in response to the escalating spread of COVID-19

The specific objectives, and scope, of workstreams 2 and 3 will evolve over the duration of the three month engagement, in response to the needs of the system in the rapidly evolving situation.

These workstreams are documented in more detail below.

## 1. Strategy and oversight

The strategy and oversight workstream is responsible for defining the overall direction of the programme. Specifically, ensuring central decision makers have access to the information they need to manage the response to the crisis. The Faculty team will work with Palantir to triage and prioritise these requirements, allocating resources across a number of organisations to ensure the requirements are met as efficiently as possible.

## Modelling and simulation

The modelling and simulation workstream is focused on generating short, and long term forecasts, about the spread of COVID-19, and the impact that has on resources across the healthcare system.

The short term forecasts will be generated through extrapolations of data that exists, and long term forecasts will be generated using simulation. This simulation models the spread of disease by playing out a simple version of the day-to-day life of an individual, the interactions they make, and the impact that has on the spread of the disease through the population. This enables long term forecasts to be generated in the absence of historical data (as is the case with a sudden disease outbreak). The Faculty team will be collaborating with an epidemiological research group, at Oxford BDI, to develop their simulation tool in order to meet the objectives of the COVID response group.

Analyses that will be modelled include:

- COVID cases: predicting the spread of the virus, including how many will require hospitalisation (accounting for self isolating/vulnerable/and underlying health conditions) in intensive care beds
- Hospital bed capacity
- Critical equipment capacity: understanding supply and demand for critical equipment including oxygen, ventilators, and PPE
- Workforce capacity: understand workforce capacity, including ITU staff, and the impact of COVID on staff absence

These will be supplemented with additional requirements from stakeholder groups over the duration of the engagement. The analysis generated will be fed into the health system dashboard.

### **Health system dashboard**

In collaboration with Palantir, this workstream is focused on the development of a dashboard to present the information generated by the data and analyses. These analyses will be displayed at a National, Country, Regional, Trust, and Hospital level, providing information to decision-makers defining the response for different levels of the system.

### **National Chest X-Ray Database**

Faculty will support NHSX to create a national database of chest X-ray and CT images that enables the validation and supports development of automated analysis technologies in response to the COVID-19 pandemic.

Faculty will support NHSX by setting up the data warehousing infrastructure, needed to safely storing the collected pseudonymised data, and of the creation of sandboxed environments, to provide researcher and technology developers with the right tools to analyse data and deploy and validate AI models. The NHSX data warehouse will be backed by an S3 bucket that receives pseudonymised image data from the data collecting organisation.

Faculty will provide its data science Platform at zero licensing cost to provide sandboxing infrastructure for the validation of AI models. Faculty Platform will address the needs of technology developers engaging with NHSX optimally, as it offers scalable computing resources, excellent usability, and separate workspaces guaranteeing IP protection.

## **Schedule 2 - Call-Off Contract charges**

For each individual Service, the applicable Call-Off Contract Charges (in accordance with the Supplier's Digital Marketplace pricing document) can't be amended during the term of the Call-Off Contract. The detailed Charges breakdown for the provision of Services during the Term will include:
